PREPARE THE PROFESSIONALS OF TOMORROW WITH CUTTING-EDGE TRAINING TOOLS

TRAIN WITH THE RIGHT EQUIPMENT

The **Cogent™ Boom System** affords students the opportunity to hone their skills with the same equipment that they will soon depend on in hospitals and clinics. By promoting comfort with these devices, you can ease the learning curve new professionals may face as they enter the workforce, reducing stress and improving patient outcomes.

Not only will your students be able to hit the ground running, but with training on the cutting edge of boom technology, students will be better prepared to adapt as technology changes.

DELIVER WITHOUT OVEREXTENDING

Personalize your **Cogent™ Boom System** freely with the whole range of **Cygnus Boom Arms** and the infinitely customizable **Titan Vertical Service Head**. These options afford the freedom to design an educational system that provides a host of tools with which students can practice while keeping your project on budget, especially when using the economical **Selene Anesthesia Boom**.

The interchangeable components of the **Titan** also allow the flexibility to upgrade and enhance your **Cogent™ Boom System** as your needs evolve and change. Add additional modules and accessories to increase training capacity and sophistication without requiring a total equipment replacement. With this functionality, the **Cogent™ Boom System** can grow to meet your changing needs without costly renovations or wasted equipment.

A CLEAN SPACE

- Reduce clutter in training spaces by organizing equipment on the Titan Service Head
- Consolidate lights, monitors, and other accessories directly on the **Cogent™ Boom System**
- Secure cables and hoses within the **Cygnus Boom Arms** or **Selene Anesthesia Boom** to prevent tangles and tripping hazards
- Make cleaning faster and easier with hygienic surfaces and fewer obstacles

EFFICIENCY WITHOUT LIMITS

- Stow equipment overhead when not in use and lower it with ease to make lesson prep simple
- Keep floor space clear for other equipment and supplies to maximize the use of training rooms
- Customize your **Cogent™ Boom System** with compact options for small spaces and high capacity equipment in larger ones
- Utilize device lifters and vertical movement options to maximize vertical space and keep equipment off the floor and out of the way when not in use
