

The Phoenix Patient Lift is a powerful tool for improving patient outcomes and reducing the risk of injury to staff and patients alike in your ICU or OR facility. Proper use of the Phoenix can make repositioning and transferring patients easier and improve rehabilitation outcomes by supporting mobility. With a compact profile, extensive freedom of movement, and a lift that is quiet, smooth, and strong; the Phoenix is as mobile as it is effective. The Phoenix can also be equipped with a Libra Monitor Boom, a monitor bracket, or another accessory to add additional functionality in the same footprint.

Features

- Working area of up to 26 square feet
- Lateral movement range of almost 3 feet
- Ceiling dependent maximum lift height of 6 ½ feet
- Load capacity over 600 lbs
- Lift speed can surpass an inch per second
- Quiet operation below 53 dB, comparable to a refrigerator
- Integrated retractable power rail with up to 6 power and low voltage outlets
- Free 360° movement
- Can be parked above the bed when not in use

Options

- Twin patient lift with over 880 lbs capacity
- Rotation stops at 340° and any multiple of 15°
- Tandem mounted Libra monitor boom or other accessory
- A range of color options
